

Past Performance & Case Studies

TechNova Solutions - Past Performance & Case Studies

Case Study 1: Department of Public Health (DPH)

Project: Statewide Health Metrics Dashboard

Duration: 18 months

Overview: TechNova built a scalable, HIPAA-compliant React and PostgreSQL application to aggregate

health metrics across 50+ regional hospitals. The system currently handles over 5 million daily transactions with 99.995% uptime.

Case Study 2: Global Logistics Corp

Project: Cloud Infrastructure Modernization

Duration: 12 months

Overview: We migrated legacy on-premise logistics tracking software to a cloud-native architecture using AWS and Node.js. This migration reduced infrastructure costs by 40% and improved API response

times by over 300%. We ensured zero downtime during the cutover phase.

These successful engagements highlight our ability to handle massive scale, stringent compliance, and complex technical requirements.
